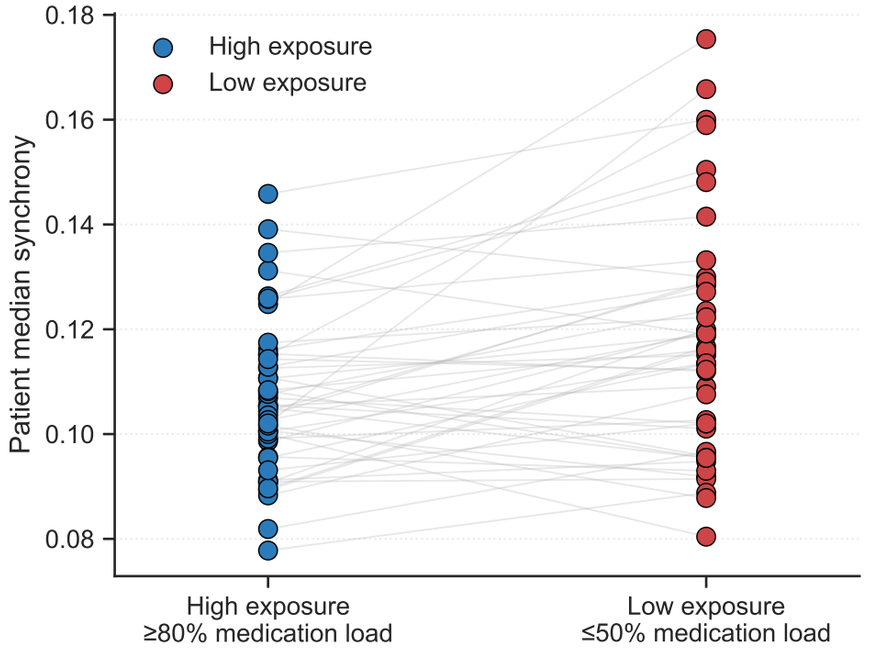
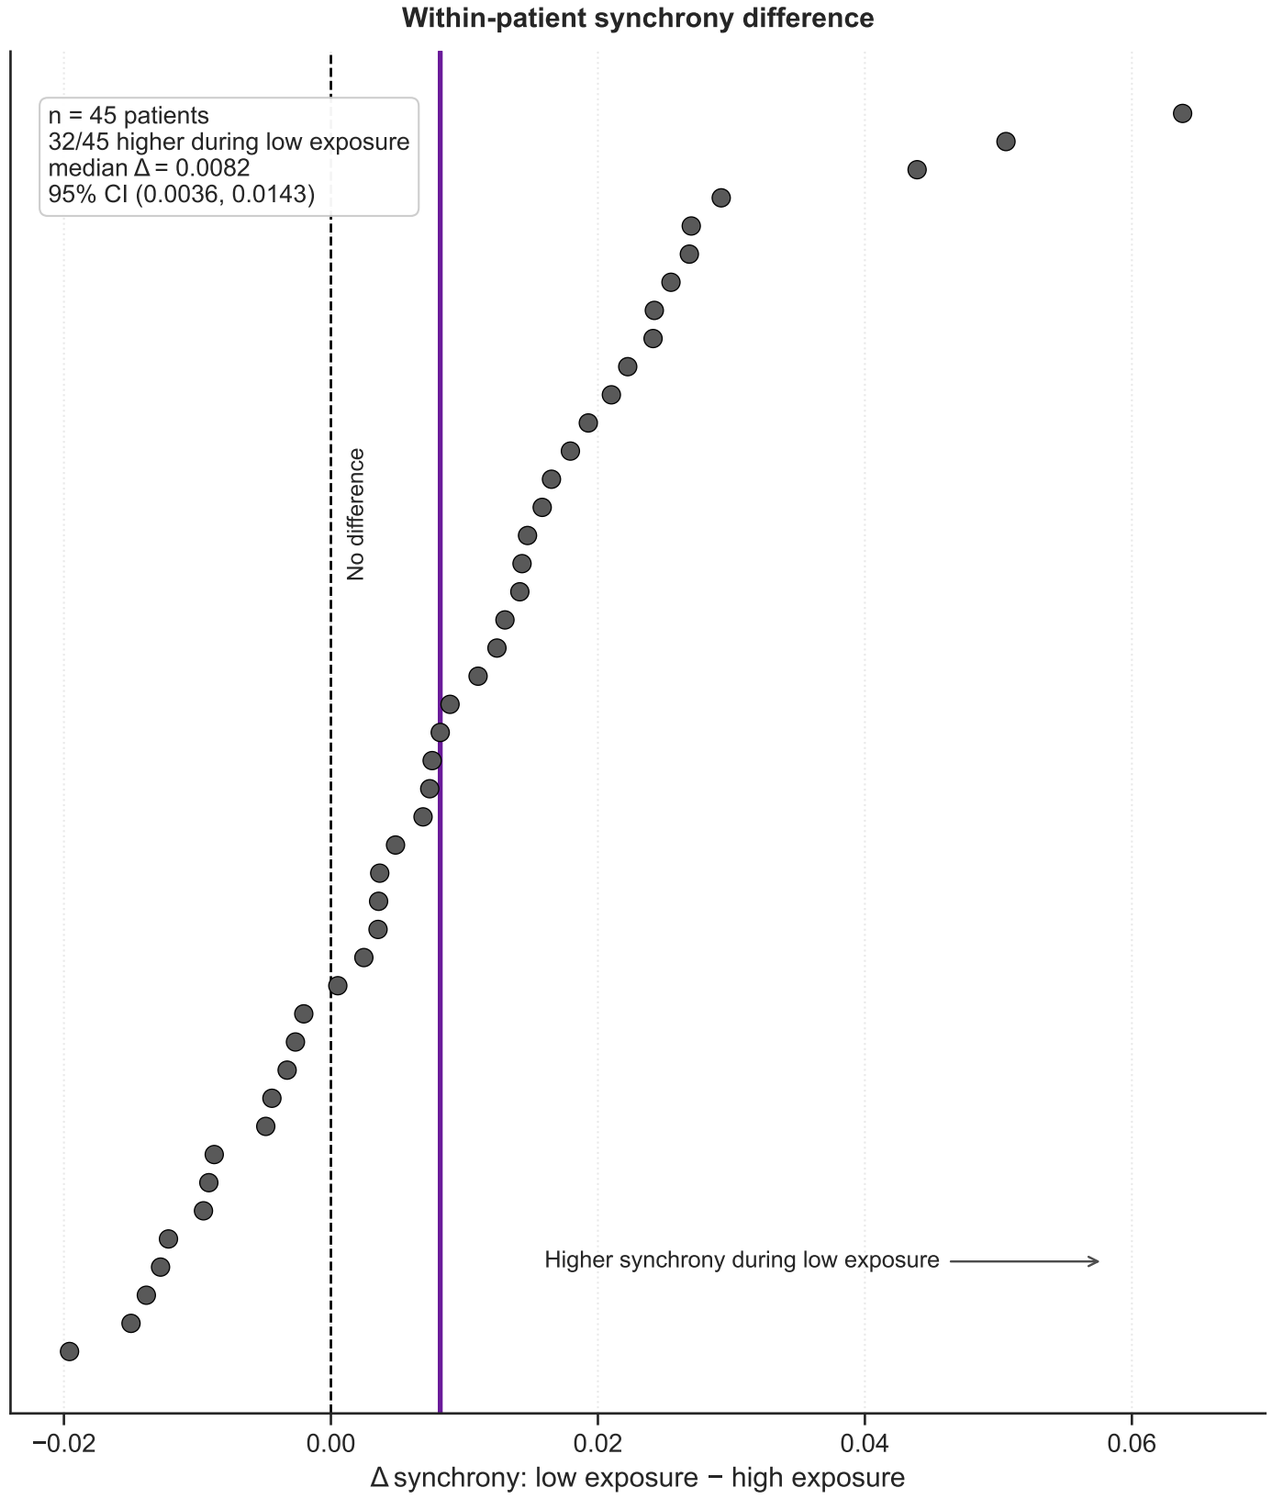
A



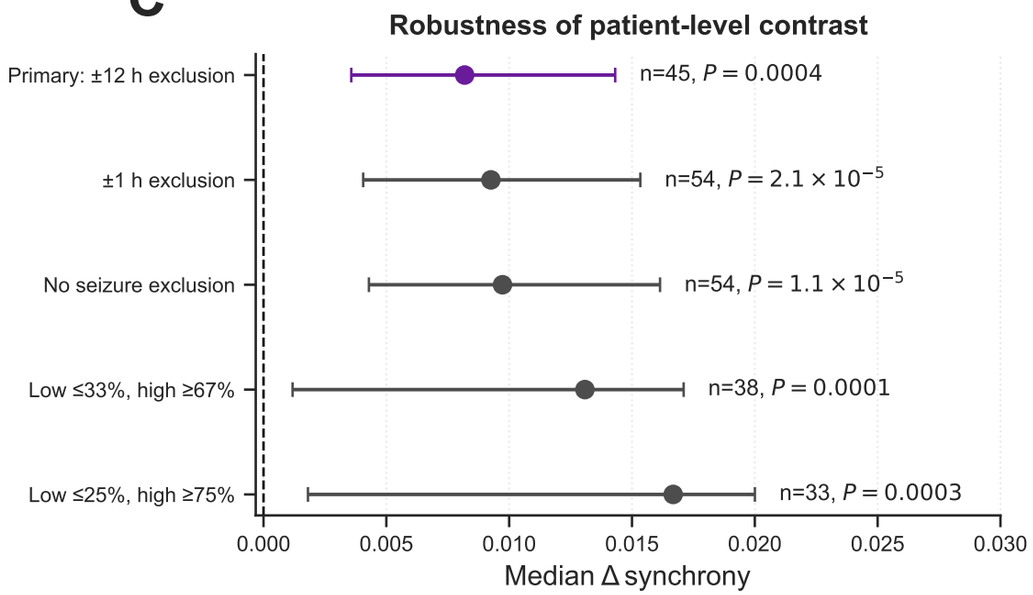
Median synchrony during high and low medication exposure
High exposure
Low exposure
Patient median synchrony
0.18
0.16
0.14
0.12
0.10
0.08
High exposure
≥80% medication load
Low exposure
≤50% medication load

B



Within-patient synchrony difference
n = 45 patients
32/45 higher during low exposure
median Δ = 0.0082
95% CI (0.0036, 0.0143)
No difference
Higher synchrony during low exposure
−0.02
0.00
0.02
0.04
0.06
Δ synchrony: low exposure − high exposure

C



Robustness of patient-level contrast
Primary: ±12 h exclusion
n=45, P = 0.0004
±1 h exclusion
n=54, P = 2.1 × 10−5
No seizure exclusion
n=54, P = 1.1 × 10−5
Low ≤33%, high ≥67%
n=38, P = 0.0001
Low ≤25%, high ≥75%
n=33, P = 0.0003
